

CRISTIAN HERIBERTO TASCÓN MUÑOZ

Backend Developer | Full Stack Developer (Python, FastAPI, React)

cristiantmm11@outlook.com | linkedin.com/in/cristiantasconm | github.com/cristianT2002 | +573012874982 | Bogotá, Colombia

Professional Profile

Full Stack Developer with 3+ years building scalable end-to-end solutions using Python (FastAPI, Flask) and React. Experience designing microservice architectures and distributed systems that have reduced memory consumption by up to 50% and production errors by 30%. Results-driven with a focus on best practices and continuous delivery through CI/CD.

Experience

Axure Technologies

Colombia

Frontend Developer

01/2026 – Present

- Redesigned an industrial monitoring platform using React and Leaflet.js, improving the visualization of daily operational events.
- Optimized component architecture, reducing interface response times by 30%.

Freelancer (part-time)

Colombia

Full Stack Developer

10/2025 – 03/2026

- Designed and implemented a PostgreSQL database for 30,000+ records, improving query times by 35%.
- Designed and developed RESTful APIs with Flask in a scalable architecture, supporting multiple concurrent clients.
- Automated data processes, reducing the team's manual effort by 40%.
- Identified and resolved bottlenecks, improving overall system performance by 25%.

Axure Technologies

Colombia

Backend Developer (Innovation & Development)

07/2023 – 12/2025

- Led the refactoring of a real-time computer vision system (YOLO), processing high-value alerts for operational accident prevention.
- Implemented Clean Architecture and event-driven architecture using asynchronous processes and decoupled services, reducing memory consumption by 50%.
- Developed RESTful APIs with FastAPI, improving system scalability and maintainability.
- Implemented automated tests (unit and integration) with pytest for REST APIs, reducing production errors by 30%.
- Managed Docker environments with monitoring via Grafana and Prometheus, reducing failure detection time by 40%.
- Implemented an ML model to anticipate consumption overages on Starlink contracts and alert the team before the cutoff date, reducing overconsumption costs by 96%.

Axure Technologies

Colombia

Software Engineering Intern

12/2022 – 06/2023

- Implemented monitoring systems with electrical sensors, improving energy efficiency by 15%.
- Developed Python modules for image processing, reducing analysis times by 25%.

Projects

Operations Management Platform

Full Stack — React, Flask, PostgreSQL, SQLAlchemy, Docker

2025 – 2026

- Developed a full-stack web platform for managing and monitoring field operations with a REST API (Flask, SQLAlchemy), multi-schema architecture in PostgreSQL, and a React frontend with Redux Toolkit, interactive maps (Leaflet), dashboards with charts, and report export functionality.
- Implemented comprehensive security: session-based authentication (Flask-Login), email-based 2FA, HTTP compression, and deployment with a reverse proxy under HTTPS; dev/production environment separation via multi-schema in PostgreSQL.

Computer Vision Risk Monitoring System

Backend — Python, FastAPI, YOLO, OpenCV, Event Bus, Clean Architecture

2023 – 2026

- Developed the backend of a risk and PPE non-compliance detection system (helmets, unauthorized access) using YOLO and OpenCV, processing RTSP streams in real time with GPU inference.

- Implemented an alert pipeline with automatic notifications via SMTP and WhatsApp API; event-driven architecture for decoupling between detection, notification, and live stream visualization services.
- System generated 15–20 high-value daily alerts in production with 85%+ accuracy, reducing real-time exposure to industrial safety risks.

Education

Universidad de San Buenaventura	Bogotá, Colombia
Electronic Engineering	2024

Technical Skills

Languages: Python, TypeScript, JavaScript, SQL, C/C++
Frameworks: FastAPI (Uvicorn), Flask, React, Node.js
Databases: PostgreSQL, MySQL
DevOps: Docker, CI/CD, Linux, Git, GitLab CI, Kubernetes, Nginx
Monitoring & Testing: Grafana, Prometheus, pytest, unit testing, integration testing
Cloud: AWS (EC2, S3, Lambda, deployment pipelines)
Concepts: RESTful APIs, Microservices, Software Architecture, Distributed Systems, Machine Learning, Agile, Scrum.

Certifications

Introduction to Modern AI – Cisco Networking Academy	2026
Python Data Architect (Basic – Intermediate) – Bootcamp Institute	2024

Keywords

Backend, Microservices, REST APIs, Distributed Systems, Software Architecture, Cloud Computing, CI/CD Pipelines, Data Engineering, Machine Learning, IoT, Agile, Scrum
