Professional Profile

Software Engineer with more than 3 years of experience building scalable backend solutions and distributed systems. Specialized in microservices architectures, asynchronous communication (event-driven, Kafka), and deployments using Docker/Kubernetes/CI-CD. Experienced in Python (FastAPI, Flask), Node.js, Java (Spring Boot), and React, with measurable achievements including a 50% reduction in memory consumption, 30% fewer production errors, and 96% reduction in operational costs. Focused on best practices, continuous delivery, and collaborative work within agile methodologies.

Education

Universidad de San Buenaventura
Electronic Engineering

Bogotá, Colombia
2024

Experience

Axure Technologies Colombia
Frontend Developer

Bogotá, Colombia
January 2026 – Present

- Redesigned an industrial monitoring platform using React, Axios, and Leaflet.js, integrating efficient REST API consumption and real-time operational event visualization.
- Optimized component architecture, reducing interface response times by 30% and improving end-user experience.

Freelancer (Part-time)
Full Stack Developer

Colombia (Remote)
October 2025 – March 2026

- Designed and implemented a PostgreSQL database for 30,000+ records, improving query times by 35% through indexing and advanced normalization.
- Developed scalable RESTful APIs with Flask, supporting multiple concurrent clients.
- Automated data pipelines, reducing manual team effort by 40% and identifying bottlenecks that improved overall system performance by 25%.

Axure Technologies Colombia
Backend Developer – Innovation & Development

Bogotá, Colombia
July 2023 – December 2025

- Refactored a real-time system (YOLO, microservices, MongoDB) and integrated the WhatsApp Business API (Meta) for automated industrial safety alert delivery.
- Implemented Clean Architecture and event-driven architecture using Kafka, asynchronous processes, and decoupled services, reducing system memory consumption by 50%.
- Developed RESTful APIs with FastAPI, improving scalability and maintainability; implemented automated testing (unit and integration) with pytest, reducing production errors by 30%.
- Managed Docker environments with Grafana and Prometheus monitoring, reducing failure detection time by 40%.
- Implemented an ML model to predict overconsumption in Starlink contracts, reducing operational overage costs by 96%.
- Managed collaborative workflows with Git and CI/CD under Agile (Scrum) methodology.

Axure Technologies Colombia
Software Engineering Intern

Bogotá, Colombia
December 2022 – June 2023

- Implemented monitoring systems with electrical sensors, improving energy efficiency by 15%.
- Developed Python modules for image processing, reducing analysis times by 25%.
- Participated in the design and implementation of backend services under the supervision of the innovation team, strengthening software architecture and agile teamwork fundamentals.

Featured Projects

Operations Management Platform

2025 – 2026

React, Flask, PostgreSQL, SQLAlchemy, Docker, Redux Toolkit, Leaflet.js

- Developed a full-stack web platform with REST API, multi-schema PostgreSQL architecture, and frontend dashboards featuring interactive maps and report exports.
- Implemented end-to-end security: session-based authentication, email-based 2FA, HTTP compression, and deployment with reverse proxy under HTTPS.

Computer Vision-Based Risk Monitoring System

2023 – 2026

Python, FastAPI, YOLO, OpenCV, Event Bus, Clean Architecture

- Developed a backend for real-time PPE and unauthorized access detection using YOLO and OpenCV over RTSP streams with GPU inference.
- Designed an event-driven architecture to decouple detection, notification (SMTP, WhatsApp API), and visualization services; generated 15–20 daily alerts with 85%+ accuracy in production.

Technical Skills

Backend: Java (Spring Boot), Python (FastAPI, Flask), Node.js

Frontend: React, Redux Toolkit, TypeScript, JavaScript, Tailwind CSS, Vite

Architecture: Microservices, Distributed Systems, Event-Driven, Clean Architecture, RESTful APIs

Databases: PostgreSQL, MySQL, MongoDB

Message Brokers: Kafka, RabbitMQ

DevOps: Docker, Kubernetes, CI/CD, GitLab CI, Jenkins, Nginx, Linux/Unix

Monitoring: Grafana, Prometheus, pytest, Unit & Integration Testing

Cloud: AWS (EC2, S3, Lambda), knowledge of GCP for microservices and container deployments.

Methodologies: Agile, Scrum

Languages: Python, TypeScript, JavaScript, SQL, C/C++

Languages Spoken: Spanish (native), English (intermediate)

Certifications

Introduction to Modern AI – Cisco Networking Academy

2025

Python Data Architect (Basic–Intermediate) – Bootcamp Institute

2024
